

Technical documentation

Server to server integration

This chapter provides technical information about the integration with IBAN Management Service using REST API integration model.

@swagger="https://iban-management.upaid.pl/server-documentation.yaml"

How to generate CSR file

To generate CSR file follow below instruction. The file must be sent to Verestro - we will sign it and return a valid certificate in a response.

An example completed certificate fields

Common Name (CN) - V- Companyname- ApplicationName

Organization (O) - Company name

Organizational Unit (OU) - free text

City/Locality (L) - free text

State/County/Region (S) - free text

Country (C) - Two-letter country code where organization is located.

Email Address - Email in case of forced renewal of the change

Example CSR generation command: `openssl req -new -newkey rsa:4096 -keyout client.key -out client.csr -nodes -subj '/CN=V- SomeCompany- Our Application /O=SomeCompany /OU=Business /L=Lublin /S=Lubelskie /C=PL /Email Address=example@user.com'`

Mobile to server integration

This chapter provides technical information about the integration with IBAN Management Service using Mobile SDK integration model.

@swagger="https://iban-management.upaidtest.pl/swagger-ui/index.html?urls.primaryName=mobile"

There is a temporary issue with rendering mobile [technical documentation](#). To view the technical documentation, please follow [this link](#).
